

Policy Compliance Monitoring: Addressing complex security requirements

From the Health Insurance Portability and Accountability Act (HIPAA) and the Gramm-Leach-Bliley Act (GLBA) to Payment Card Industry (PCI) standards, regulations require your organization to implement and adhere to technical security policies to protect the integrity and security of your technology infrastructure, and confidentiality of sensitive data.

Information security compliance professionals face continual pressure to help the business efficiently address these complex requirements—while

“With Compliance Monitoring, Allied InfoSecurity provides a cost-effective solution for reducing risk while providing the proof of compliance that auditors require.”

meeting the demands of internal and external auditors and increasingly sophisticated customers. How can you keep your IT environment secure while complying with federal regulations and industry standards? And how can you ensure that your approach will satisfy auditors' requirements?

With Compliance Monitoring, Allied InfoSecurity provides a cost-effective solution for reducing risk while providing the proof of compliance that auditors require. The netSensor™ is installed in your environment and used to monitor your compliance. We check your systems and network traffic against pre-defined and custom compliance policy templates to ensure that you're complying with internal policies and external requirements.

About Allied InfoSecurity, Inc.

An independent company focused only on security and staffed by certified security professionals, Allied InfoSecurity is a consulting and outsourcing provider that helps businesses improve and manage their information security programs, mitigate risk, and respond to regulatory and marketplace demands more quickly and effectively than they could on their own.

We monitor your network in real time—identifying the presence of in-transit data that violates your organization's stated security or privacy policies around credit card numbers, Social Security numbers, or other personally identifiable information. In addition, we perform unlimited scans of stored data to confirm that it is also in compliance with applicable policies. Unlike competitive offerings, our unlimited scanning approach supports constant, proactive identification of policy compliance exceptions—without increasing your compliance costs.

We combine the results of the compliance scanning and real-time network monitoring into intuitive, easy-to-read, web-based reports. These reports deliver a management-level, dashboard-style overview of your compliance levels, detailed information for each compliance exception detected, and the documentation auditors require to demonstrate compliance.

Compliance Monitoring includes:

- Real-time monitoring of traffic on the network
- Unlimited system compliance scanning (based on the number of contracted systems)
- Scan preparation, including creation of custom compliance templates
- Scheduled and on-demand compliance scanning options
- Compliance reporting against well-known standards, including ISO 27002, HIPAA, GLBA, and PCI-DSS
- Standardized web-based reports delivered securely through the customer portal

Monitor Compliance Against Well-Known Standards

- ISO 27002
- HIPAA
- GLBA
- PCI-DSS
