

Managed Firewall Services: Tailoring support to your organization's needs

Every organization needs a disciplined approach to monitoring and managing its security infrastructure. As part of our Managed Security Services, Allied InfoSecurity offers two levels of firewall support:

- Managed Firewall Services for comprehensive firewall management, and continuous monitoring and activity analysis—ensuring that your firewalls are secure and running at peak performance.
- Monitored Firewall Services if you wish to manage your own firewall but want an expert third party to perform continuous monitoring, to proactively assess anomalous activity, and to notify you of any potential security issues or risks.

Overview: Monitored Firewall Services

“Choose the Managed Firewall option that best fits your operational and budgetary requirements.”

Monitored Firewall Services are ideal if you prefer to handle your own firewall management. Using the netSensor™, we capture all activity on your firewalls, compress the data, and securely

transmit it to our Security Operations Center (SOC) for examination by our analysts. We report all confirmed security incidents to your staff according to pre-defined escalation procedures.

With Monitored Firewall Services, you benefit from:

- Continuous monitoring of firewall stability and performance
- Continuous examination of logs for bad traffic or anomalies
- Custom alerting and escalation for any issues
- Convenient online access to dashboard reports and logged data
- Monthly statistical threat summary report
- Monthly reporting of all activities
- 24x7 or 8x5 service options
- Access to monthly “State of the Network” webcast

Incident response assistance is available as an add-on service.

About Allied InfoSecurity, Inc.

An independent company focused only on security and staffed by certified security professionals, Allied InfoSecurity is a consulting and outsourcing provider that helps businesses improve and manage their information security programs, mitigate risk, and respond to regulatory and marketplace demands more quickly and effectively than they could on their own.

Overview: Managed Firewall Services

With this comprehensive solution, Allied InfoSecurity takes over day-to-day responsibility for administering, managing, and monitoring your organization's firewalls. Our security analysts work with you to review, validate, implement, and audit any firewall changes. In addition, we monitor your firewall configurations for any unauthorized changes, back up your device configurations, and interface with your software and/or hardware vendors to address any break-fix problems.

With Managed Firewall Services, you enjoy all of the benefits previously outlined under Monitored Firewall Services, as well as:

- Firewall architecture and configuration assessment and guidance
- Implementation of technical configuration changes, including change management and documentation
- Daily backup of configurations and before/after changes
- Continuous monitoring for changes to configuration and/or rule sets
- Expert interaction with vendors for hardware/software problems
- Firmware upgrades/patches as required
- Full management or co-management, depending on your requirements

Optional add-on services include gateway-to-gateway VPN connections and end-user-to-gateway VPN connections.

About Allied InfoSecurity Managed Security Services

Allied InfoSecurity provides a flexible set of security management and monitoring capabilities that we can quickly adapt to your organization's specific needs. Just as important, you save time and money because we deliver this comprehensive suite of services using your existing infrastructure.
