

Managed Vulnerability Scanning: Proactively identifying threats and exposures

Proactive identification and remediation of your network vulnerabilities and threats is not only a prudent information security practice; it's also mandated by numerous government and industry regulations—including the Health Insurance Portability and Accountability Act (HIPAA), the Gramm-Leach-Bliley Act (GLBA), and Payment Card Industry (PCI) standards. Allied InfoSecurity offers Managed Vulnerability Scanning services to meet these needs. Based on powerful, open-source technologies, this best-of-breed scanning solution provides proactive, risk-based reporting

of the problem areas that hackers, worms, and viruses could use to infiltrate your network.

Allied InfoSecurity performs Managed Vulnerability Scanning from the netSensor™ installed within your environment for internal systems and from the Security Operations Center for external-

facing systems. Our Managed Vulnerability Scanning solution uses industry-proven vulnerability scanning engines to comprehensively assess your network's security posture.

Unlike many competitors, Allied InfoSecurity offers unlimited scanning that can be executed on demand or scheduled to meet your requirements. Our unlimited scanning approach allows scans to be run on a continuous schedule to provide constant, proactive identification of vulnerabilities without increasing your threat management costs.

Results of the scanning are presented using intuitive, easy-to-read, web-based reports. These reports deliver a management-level, dashboard-style overview of your vulnerability landscape, as well as detailed information for each vulnerability detected. This information includes the security threat, consequences of an exploitation of the threat, links to resources with more information on the threat, and detailed remediation instructions to eliminate the threat from your network. We rate all threats that we identify during Managed Vulnerability Scanning according to the Common Vulnerabilities and Exposures (CVE) list—making it easy to prioritize threat remediation.

“Our Managed Vulnerability Scanning solution uses industry-proven vulnerability scanning engines to comprehensively assess your network's security postures.”

About Allied InfoSecurity, Inc.

An independent company focused only on security and staffed by certified security professionals, Allied InfoSecurity is a consulting and outsourcing provider that helps businesses improve and manage their information security programs, mitigate risk, and respond to regulatory and marketplace demands more quickly and effectively than they could on their own.

With Allied InfoSecurity Managed Vulnerability Scanning, you benefit from:

- Unlimited internal and external scanning (based on the number of contracted systems)
- Custom scan preparation
- Scheduled and on-demand scanning options
- Risk-rating of vulnerabilities using the Common Vulnerability Scoring System
- Prioritized remediation recommendations
- Standardized regulatory compliance reporting and detailed trend reporting
- Web-based reports delivered securely through the customer portal

Web application scanning is available as an add-on service.

About Allied InfoSecurity Managed Security Services

Allied InfoSecurity provides a flexible set of security management and monitoring capabilities that we can quickly adapt to your organization's specific needs. Just as important, you save time and money because we deliver this comprehensive suite of services using your existing infrastructure.
