

The netLogger™: Providing a cost-effective, scalable solution for storage and analysis of system and application logs

Numerous regulations and industry standards—including the Health Insurance Portability and Accountability Act (HIPAA), the Gramm-Leach-Bliley Act (GLBA), and Payment Card Industry (PCI) standards—mandate

“The netLogger™ provides a secure, cost-effective solution to meet system and application log requirements.”

the required storage of system and application logs for forensic purposes. Retaining all of the log information for systems and applications on your networks—and having the ability to search those logs for relevant information—can be

overwhelming. The netLogger™ provides a secure, cost-effective solution to meet these daunting requirements.

The netLogger™ supports the storage of large quantities of log data while preserving its admissibility as evidence in a court of law. With this solution, we redirect your system, network, and application logs to the netLogger™ appliance. This appliance also provides a database geared specifically for massive, long-term forensic archiving of log data. We collect data in its native format and preserve its integrity by digitally signing and time-stamping and then securely storing it.

With this solution, you always retain ultimate control over your data and the netLogger™ device. That's important since log data often contains sensitive information that you may not want to store on systems that reside outside your network. Ownership of the device also gives you flexibility. Although Allied InfoSecurity provides a full suite of services to manage and monitor the log collector for optimal performance, you're never tied to a single service provider.

Finally, this solution empowers you to easily search logs and retrieve relevant information. The netLogger™ provides a simple, secure web interface designed to make searching through extensive log data fast and effortless. You can define searches by date/time, system, application, or any other number of unique variables.

About Allied InfoSecurity, Inc.

An independent company focused only on security and staffed by certified security professionals, Allied InfoSecurity is a consulting and outsourcing provider that helps businesses improve and manage their information security programs, mitigate risk, and respond to regulatory and marketplace demands more quickly and effectively than they could on their own.

With the netLogger™, you benefit from:

- Real-time collection of all system, application, and network logs
- Unlimited storage and retrieval of log data (based on available disk space)
- Management and monitoring of the netLogger™ appliance, including operating system patching and optimization
- Standardized web-based reports
- Adherence with log archival requirements of well-known standards, including ISO 27002, HIPAA, GLBA, and PCI-DSS

About Allied InfoSecurity Managed Security Services

Allied InfoSecurity provides a flexible set of security management and monitoring capabilities that we can quickly adapt to your organization's specific needs. Just as important, you save time and money because we deliver this comprehensive suite of services using your existing infrastructure.
